

<b>Course title</b>		<b>WRITING 3T STANDARD OPERATING AND MAINTENANCE PROCEDURES</b>	
<b>Course overview</b>		<b>Your Key benefits; our course objectives</b>	
<p><b>workshop teaches how to stop failures with SOPs that let you control ‘chains of events’ and get 100% right-first-time results</b></p> <p><b>Eliminating errors, defective work, and failure ‘traps’ stops equipment problems and gets immediate positive benefits for your operation.</b> You have fewer errors, do less repairs, slash operational problems, reduce costs, cut time losses, less rework (even no rework), stop wasting materials and parts, deliver higher availability, more production, less maintenance, smaller stock holdings and lower spares inventory levels.</p> <p>In this workshop, you learn the outstanding failure prevention techniques of the Accuracy Controlled Enterprise (ACE). Accuracy Controlled Enterprises standardized their work with the 3T’s of failure prevention and do jobs repeatedly correct and accurate, time-after-time by preventing the causes of errors. They use ACE 3T standard operating procedures (SOP) focused on defect elimination and failure prevention. They stop operating risks dead-in-their-tracks and <b>make things go right</b> by discovering defects and correcting them before they become problems. This scientifically sound approach is based on the foundation processes used by the Japanese to become the world-renown quality manufacturers they are. You will learn how to apply the best work quality methods and techniques used by the world leaders in work accuracy and precision to stop your plant and operating problems.</p>		<p>You will:</p> <ul style="list-style-type: none"> <li>discover where and how defects, failures and error enter your business</li> <li>learn to fully measure and calculate the devastating corporate-wide impact of failures, both the occasional large ones that everyone knows of and, most importantly, those many annoying, repetitive small failures that you brush past all the time but which add-up to bucket-loads of lost profit</li> <li>explore, investigate and learn the new methods now available to you that deliver tight statistical control over all work so you can stop failure incidents and manage risks in every activity of your business</li> </ul> <p>Be taught how to interweave the new failure preventing ways into your current operating procedures to deliver immediately improved accuracy control and higher quality with right-first-time performance.</p>	
<b>1 to 2 days</b>		<i>Training in house or out of Canada may require more days</i>	
<b>Target audience and industries</b>		<p>Who should go to this 1-day workshop that stops problems and wastes?</p> <p>This day-long workshop is for Managers, Engineers and Supervisors from companies and organisations who wish to know how to permanently eliminate defects and prevent failures in their operating plants, facilities and work processes.</p>
